Bitmanagement Software GmbH

Press-release, January 03, 2004

Architectual application wins first price

The applications "Virtual Grenoble" wins first price in the category "Walktrough" at the Golden Polygon Awards by using BS Contact VRML-technology of Bitmanagement.
The magazine 3D-Test arranged this contest in four categories.

Due to integration of video and 3D sound in release 6.1 and supported functions like shadow and mirror, the todays renderer enables more and more realistic imrressions.

As further user of Bitmanagements VRML-technology the application "300 anniversary of St. Petersburg" was able to reach the finale consisting of five 3D-modells.

In general applications of this kind (content) have a growing demand in architecture and tourism.

The modus "Walktrough" in the menue "movements" of BSContact VRML allows the spectator of a 3D-modell (e.g. a town or a industrial complex) to move freely in the model.

Navigation of the spectators position may be done by using the mouse.

Other possibilities to interact with the 3D-modell like e.g. booking or additional informations in respect of placed objects are depending of the marketing concept of the application.

Selected new customers of BS Contact VRML-technology of Bitmangement in the area of architecture gained in December 2003 are:

- Construct 3D Ltd/ plan2reality, www.construct3D.com
- Digital Media Production, Inc, Project www.sazkaarena.cz
- WS Atkins (Services) Ltd, www.atkinsglobal.com (internal application)
